RE: Lead & Phthalates Content of YKK Product

0001318 CHC-26 DA E 7/16
0004984 CHC-36 DA E 1/2

This letter is to certify that the products listed above and manufactured by YKK (U.S.A.) Inc. comply with the below 3 CPSIA requirements as scheduled through August 13, 2011, specifically:

- 1) Lead content in the paint/coating is below 90 ppm as measured by ASTM E1645/E1613.
- 2) Lead content in the part substrate or material is below 300 ppm. and
- 3) CPSC Restricted Phthalates content of plastics is below 0.1%.

In actuality, our current lead content in the substrate is below 200 ppm and we are working to reduce that level even further. Please note that the 100 ppm lead limit for substrate indicated to become effective August 14, 2011 in the CPSIA regulation is if it is technologically feasible for the product.

This certificate expires on August 13, 2011.

Sincerely,

Steve Hetes
